folio

ACCOUNTING. BILLING. FOLIO AI.

Your business, in one place.

From the first bill to the monthly report.
Run your books on Windows and keep your Android sales team connected.

Meet Folio 2.7.3

Actual desktop interface with demonstration records.

folio

Keep every part connected.

A practical workspace for daily billing, accounts, stock and reporting.

01

Sales & purchases

Create invoices and purchase bills. Manage customers and suppliers, track balances and add an item while invoicing.

02

Cash & multiple banks

Keep named bank and cash accounts together with their ledgers. Record receipts, payments and transfers through the supported entry screens.

03

Journals & ledgers

Group accounts, duplicate journal entries and paste ledger names and amounts from Excel. Balanced-entry checks stay active.

04

Stock & production

Maintain products, materials, units and rates. Record production, rejects and material usage with recipe support.

05

Reports & monthly MIS

See sales, purchases, cash/bank books, trial balance, profit and loss, balance sheet and monthly MIS. Request Excel when you need a file.

06

Your documents & data

Customise A4 invoice layout and company details. Review supported imports and keep local backups of your books.

Material unit-cost figures use current rates and recorded usage or recipes; they exclude allocated labour, power and other overheads.

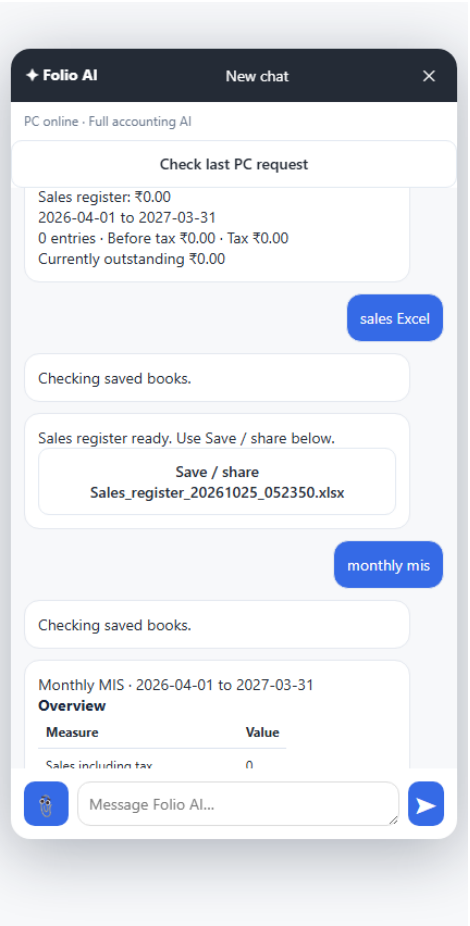

folio

Talk to your books.

Folio AI turns a conversation into supported accounting actions.

Illustrative conversation; not a live result.

Actual Android test screen

Ask. Attach. Act.

Open the floating chat on Windows or Android. Attach PDFs, images or supported spreadsheets; ask to create or edit entries.

Clear details. Real actions.

Complete explicit requests can save directly. Folio asks for missing or ambiguous details and checks the books before changes. Say “preview” to review first.

Permission stays with the owner.

Enable full accounting AI for trusted phone users in PC Cloud sync. Standard salesperson accounts retain restricted access.

folio

Sell anywhere.

Stay connected to the office.

Android bills and receipts travel through your configured cloud connection to the owning PC. Phones can use different internet networks.

ANDROID

Bills, receipts & AI

>

CLOUD

Business connection

>

WINDOWS PC

Your saved books

For full-book AI actions and reports, keep the main PC open, online and cloud sync enabled. Standard mobile billing retains its existing offline queue.

Bring your records with you.

Review and map supported Excel, CSV, TSV, JSON, XML and SQLite imports. Proprietary backup formats require a format-specific converter.

Start with a demonstration.

Dottedline Imaginations

muhammadnihalrk@gmail.com

AI uses the configured Gemini service and its plan limits. Relevant messages, attachments and requested records are sent to that provider. Cloud delivery is not a backup; keep PC backups.
